WARN

Some concerns — review the warnings below.

- CPU 85
- GPU 100
- RAM 100
- Storage 85
- Network 85
- Peripherals 100

CPU

WARN · 85

CPU throughput over time (Mops/s) · peak 65 · dashed = initial

0:00 5:00

Threads	2
Average	41 Mops/s
Initial	40
Sustained	40
Errors	0
Max UI freeze	2,365 ms

- Every calculation was verified correct.
- Held 102% of initial CPU speed under sustained load — no significant throttling.
- The page froze for up to 2.4 s — the system is struggling (possibly swapping memory).

GPU

PASS · 100

Frame rate over time (FPS) · peak 5.8 · dashed = initial

0:00 5:00

API	WebGL 2
Load	high
Average	2.1 FPS
Initial	2.2
Sustained	2.0
Render checks	30/30
Resets	0

- All 30 render checks matched.
- Held 92% of initial frame rate under sustained load — no significant throttling.
- Very low frame rate at this load level. Not a fault by itself — compare with the same model or lower the GPU load.

RAM

PASS · 100

Memory bandwidth over time (MB/s) · peak 740

0:00 5:00

Tested	1,024 MB
Target	1,024 MB
Bandwidth	333 MB/s
Passes	48
Errors	0

- 48 write/verify pass(es) over 1,024 MB with no errors.

Storage

WARN · 85

API	IndexedDB
File	16 MB
Passes	0
Avg write	–
Avg read*	–
Slowest 1 MB write	–
Errors	0

- No complete storage pass finished — run longer or choose a smaller file in Settings.

Network

WARN · 85

Latency per request (ms) · peak 1,854

0:00 5:00

Server	192.168.1.125
Median latency	18 ms
Jitter	127 ms
Failed	0.0%
Avg down	145.4 Mbps
Avg up	102.8 Mbps
Drops	0

- 396 requests, 0.0% failed.
- High jitter (127 ms) — unstable Wi-Fi link.
- Results include the Wi-Fi and the network path to the test server, not just this computer.

Peripherals

PASS · 100

Webcam	PASS
Microphone	PASS
Speakers	PASS
Keyboard	PASS
Trackpad/touch	PASS
Screen	PASS
Touchscreen	PASS

- Webcam: Front Camera (1bcf:28c0), 1280×720 @ 30 fps
- Microphone: Default - Internal Mic, peak -25 dBFS
- Speakers: played both, left, right
- Keyboard: 19 of 77 layout keys pressed
- Trackpad/touch: Coverage 31/60 · input: mouse
- Screen: 1366×768 px panel (1.00× scaling), no defects flagged
- Touchscreen: 48/252 squares registered (19%), up to 1 touch point(s) at once

Battery: Plugged in at 100% (or no battery present) — unplug and re-run to test the battery.

Throttling is relative to this unit's own first minute. Fanless laptops and Chromebooks throttle more by design, so compare against a known-good unit of the same model.

*Storage reads may be served from cache and look faster than the drive really is.
